

Bio Process Lab B--2009
Event Manager Shayne Zurilgen
szurilgen@musd.net

1. This event will consist of a series of lab stations.
2. The emphasis will be on process skills such as formulating and/or evaluating hypotheses and procedures, using scientific instruments to collect data, making observations, presenting and/or interpreting data, or making inferences and conclusion rather than on factual knowledge of biology. Some math calculations may be included.
3. Measurements will be made to one estimated figure on the measuring device.
4. The National website is a good resource.
5. The sample questions listed in the event rules are good indicators of the types of activities included on the test.
